

## Mini plier - R8

### General:

Dimensions: 30 x 70 x 126mm  
Weight: 280g

Use for all Volta round Belts:  
Up to Ø 12mm - normal use (A).  
Up to Ø 8mm – normally closed position(B).

To be used for all Volta V Belts: up to V 13\*.  
According to size of V-profile, apply the clamp as shown in the illustration.

### Useful tips:

For reliable profile splicing, keep the tool and belt clean, use the appropriate Volta welder (The welder must be Teflon coated. Preheated welder at least 10 minute prior to use).

After welding, allow between 2–5 minutes, depending on belt diameter, cooling time before releasing the profile from the plier. Allow additional 10 minutes, at least, cooling time before using the belt. This period can be shortened by using air gun or water.

Occasionally apply oil on the sliding bars.

In cold environments, raise belt temperature up to room temperature.
