Major Brands

We stock major timing belt, conveyor belt and chain brands, as well as pulleys, chain, sprockets, gears, bearings, linear motion and hardware components. We have exclusive UK distributorships for a number of key industrial brands, including Continental, BRECO, Wippermann and IKO. With in-house manufacturing facilities, supported by key manufacturing partners we have large gear, pulley and sprocket stocks available for rapid rework, with made-to-order components a speciality.

TransDev's Special Belts Division has the expertise and capabilities to fulfil the most exacting of belting briefs. We have the largest Special Belt machining capabilities in the UK. State of the art equipment has enabled TransDev to manufacture some of the most complex belts ever made, many within microns of pitch accuracy. We are also a 'one stop shop' for Plastic materials, machining, routing and injection moulding.

Easy Ordering

As well as ordering over the phone and via email you can also order online. TransDev Direct is the fast and easy way to order power transmission, conveying and motion products. The online store has been developed for account holding TransDev customers looking for excellent reliability, quality and service.

Order by 4.30pm for next day delivery*

* Monday to Friday (exc public holidays) and subject to terms.

Food and Beverage

Hygiene in Motion

Food manufacturing, preparation and packaging areas bring with them their own set of unique requirements. From moisture to extreme temperatures components must operate whilst adhering to strict contamination, health, safety and environmental rules. The right components can have a positive impact on productivity and profitability, whilst cutting energy and consumption costs and reducing costly downtime.

PRODUCT FOCUS: Special Belt Backings

Timing belts can be modified by applying one or more backings, enabling infinite different designs for conveying applications. Specific properties such as food hygiene, high or low coefficient of friction, soft, hard or compressible, heat or cold resistance can all be achieved with a backing. We can bond our backing materials to virtually any base belt for use as conveyor belts, haul-off belts, puller belts, forming belts and nesting belts.

The TransDev Difference

- Large stocks of compatible products
- Bespoke belting and chain solutions
- Competitive pricing
- Next day delivery of standard components
- Expert support and assistance

SPECIAL BELTS

BRECOprotect® TIMING BELTS

There are few industrial applications in which hygiene plays such an important role as in the food industry.

Specialist food timing belts for this environment are required to meet the stringent requirements, in particular:

- 1: Optimum resistance to cleaning agents
- 2: Very good hydrolysis resistance
- 3: Excellent resistance to microbes.

Microbes and their toxins that come into contact with food can lead to food poisoning. These timing belts are specifically

designed for food processing and packaging. The elastomer TPUAU 1-blue meets the conformity criteria of the FDA CFR § 177.1680 (as well as the EC directives 90/128/CEE and 96/11/CE). The blue colour of the polyurethane makes it clearly identifiable for the customer as being suitable for use in the food industry. Contamination adhering to the surface is easy to detect.

BRECOprotect® food timing belts are manufactured without the typical coiling nose. The steel tension members are completely enclosed in polyurethane, which protects them

from corrosion. The fact that these timing belts do not feature a groove also prevents hidden and difficult-to-remove contamination and thus makes the cleaning process easier. The blue timing belts for the food industry are available in the profile types AT5, AT10, AT15 T10 and T20 with belt widths of 25 to 100 mm.

In addition to the proven enclosed linear modules, joined linear and open length variants are also available as well as an open length flat belt.
